Exponential-e delight at security awards shortlisting

Leading business technology enabler and Ethernet specialist, Exponential-e, is celebrating after being named as a finalist in the prestigious Computing Security Awards.

The fast-growing company has made a select shortlist for the Security Service Provider of The Year category at the showpiece event. Finalists include the best security products and services from around the world.

The awards, presented by Network Computing and Computing Security magazines, were launched last year to recognise the companies, services and products that have been especially successful in ensuring organisations stay secure.

Entrants are shortlisted according to the number of nominations received from customers and partners.

The winners will be announced at a ceremony at the Grand Connaught Rooms in Covent Garden, London, on November 3. Voting is open until October 21.

More than 170 companies were entered for the Security Service Provider of The Year category, with just seven – including multi-award winning Exponential-e - making the finalists' shortlist.

These are the only awards that recognise excellence in IT security. The winners will be determined by the democratic process of online voting.

Welcoming the news, Exponential-e's CEO, Lee Wade, said: "We would like to thank everyone whose votes helped us to make the final stage. Now we hope as many people as possible will vote for us in our quest to be crowned eventual winners of the Security Service Provider of the Year category.

"It's always been our priority to offer clients the very best quality of service in boosting their business security. Being named as a finalist is also recognition of the hard work of our talented staff and what we have achieved as a business."

Other award categories – numbering 17 in total - include Anti Virus Solution of the Year, Security Reseller of the Year and Network Security Solution of the Year.

- Anyone who would like to vote for Exponential-e should visit www.computingsecurityawards.co.uk, click on the vote option on the left, and select the drop down selection box for the “Security Service Provider of the Year”, which appears towards the end of the nomination list.

About Exponential-e

Since our foundation (2002), we have adopted the policies and the leading edge engineering technologies that offer UK companies resilience, speed, control and versatility – the prerequisites for a non-stop compute network platform. In order to achieve this, we took network engineering decisions with only corporate clients in mind. Most importantly, we insisted that no consumer broadband traffic would disrupt our network’s resilience and have any impact on our clients’ business.

VPLS is now the cornerstone of our Smart Wires® approach to cloud computing – both private and public cloud applications where we can offer the important end-to-end SLAs to support your cloud applications.

Today, we have 1,000 blue chip corporate clients and a balance sheet worthy of Dun & Bradstreet’s coveted No.1 credit status. We offer old fashioned quality of service sustained and supported by world-class leading edge network solutions.
